

Simpler. Faster. Better.

## A More Cost Effective Home...

With ECO-Block it is possible to design a home that is not only cost effective to build, but will save you money over a lifetime.

The cost to build your ECO-Block home is comparable, and often less expensive, than other forms of construction, BUT with numerous additional benefits.

And, all the features integrated into an ECO-Block home add higher re-sale value, making your investment more valuable in the long term.

- ICF homes require less energy to maintain a steady, comfortable temperature. Energy bills can often be reduced by up to 50%, saving you money year after year.
- Heating and cooling mechanical system output can be reduced by up to 50% in size. The savings are upfront and continuous.
- An ECO-Block home lasts for generations (not just years) and requires less maintenance, saving money throughout the lifetime of your home.
- ECO-Block saves on labour costs. The ECO-Block wall system completes five building steps all with one product...*Wall Structure, Insulation, Air Barrier, Vapor Barrier, Internal and External finishing anchorage*. By reducing the number of sub-contractors, the ECO-Block ICF system can cut substantial time from the construction schedule allowing builders to get to a 'weather tight' stage more quickly.
- Wall construction can be completed using less skilled labourers supporting a qualified builder.
- Once the wall is filled with concrete, sub-trades can commence working on both sides of the wall simultaneously.
